## PREFACE

This guide provides installation procedures for Tzunami Confluence Exporter and detail steps to extract contents from Confluence using Tzunami Confluence Exporter. The guide also describes how to extract contents non-interactive way using command-line instructions and best practice.

This preface contains the following topics.

- Intended Audience
- Conventions
- Technical Support
- Comments and Suggestions

## **INTENDED AUDIENCE**

Tzunami Confluence Exporter Guide is intended for:

- System Administrators who are responsible for exporting Confluence contents and setting migration environment using Tzunami Deployer.
- Project Managers and IT Managers who create and regulate usage of Tzunami Deployer and Tzunami Confluence Exporter.

## **CONVENTIONS**

The following text conventions are used in this document:

- Commands and keywords are given in **boldface**.
- Terminal sessions, console screens, or system file names are displayed in fixed width fonts.

**Caution** indicates that the described action might result in program malfunction or data loss.

**Notes** contain helpful suggestions about or references to materials not contained in this manual.

Tips provide information that might help you solve a problem.

## **TECHNICAL SUPPORT**

Before contacting Tzunami Support team, ensure that you are referencing the latest copy of this user guide (Ctrl+Click to follow link) <u>Tzunami Deployer Confluence Exporter Guide</u>.

For additional information, please contact Tzunami Support Team at <a href="mailto:support@tzunami.com">support@tzunami.com</a>

## **COMMENTS AND SUGGESTIONS**

Your feedback is important to us and will help us to provide the most accurate and high-quality information possible in our documentation. Send us comments or suggestions by email to <u>support@tzunami.com</u>. Be sure to include as much of the following as possible:

- The document title.
- The location that the document was accessed from (either downloaded from Tzunami web site or the Tzunami Deployer User Guide and Tzunami Confluence Exporter Guide available in Tzunami Deployer).
- The section or chapter number and the original text found in the document.

When you send information to Tzunami Deployer, you grant Tzunami a non-exclusive right to use or distribute the information in any way it believes appropriate without incurring any obligation to you.

# **1** INSTALLING TZUNAMI CONFLUENCE EXPORTER

This chapter contains information about installing Tzunami Confluence Exporter. It contains the following topics:

- System Requirements
- Permission Requirements
- Installing Tzunami Confluence Exporter
- Uninstall Tzunami Confluence Exporter

## **1.1 SYSTEM REQUIREMENTS**

The following table lists the system requirements for Tzunami Deployer Confluence.

Components	Minimum Requirements
Computer and processor	2GHz Pentium processor or equivalent
Memory	2 GB (Minimum); 4GB (Recommended)
Hard disk	50Mb (additional space will be required for the Tzunami Deployer projects, which may vary from 10 Mb to 4 GB).
Supported Operating System	Windows Server 2008/2012, Windows Vista, Windows 7, Windows 8 & Windows 10 or higher.
Supported Architectures	x86 and x64
Network	Intranet/Internet access depending on connectivity requirements
Display	800 x 600, 256 colors (minimum); 1024 x 768 high color
Microsoft .NET Framework	Microsoft .Net Framework 4.5.1 (including lower versions like 2.0, 3.0, 3.5 and 4.0)

#### Table 1-1: System Requirements

## **1.2 PERMISSION REQUIREMENTS**

### **1.2.1** Connecting Confluence Server

For connecting to Confluence server using Tzunami Confluence Exporter, you need to enable the Remote APIs from the Confluence Administration Console.

#### To enable Remote API:

- 1. Go to the Confluence 'Administration Console':
  - Choose Browse > Confluence Admin. The 'Administrator Access' login screen will be displayed.
  - Enter your password and click **Confirm**. You will be temporarily logged into a secure session to access the 'Administration Console'.
- 2. Select 'General Configuration' in the left-hand panel.
- 3. Click 'Edit' next to 'Feature Settings'.
- 4. To enable Remote API, check 'Remote API (XML-RPC & SOAP)'.
- 5. Click 'Save' to retain your changes.

You must disable Proxy Settings to avoid communication conflicts between Confluence Server and Tzunami Confluence Exporter. For more information, contact your system administrator.

And user needs following permissions for connecting to Confluence Server:

- User must be member of confluence-administrator Groups.
- User must be a member of confluence-user group.

## **1.3 INSTALLING TZUNAMI CONFLUENCE EXPORTER**

You can install Tzunami Confluence Exporter on any machine from which you can connect to Confluence Application Server.

#### To install Tzunami Confluence Exporter:

1. Unzip the zip file, run TzunamiConfluenceExporter.msi. The Tzunami Confluence Exporter setup wizard will launch. To advance through the install wizard, click **Next**.

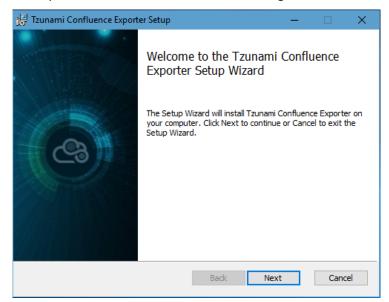

Figure 1-1: Welcome Window:

2. In the End-User Licensing Agreement panel, click "I accept the terms in the License Agreement" and click Next to continue installation.

🚰 Tzunami Confluence Exporter Setup	_		×
End-User License Agreement Please read the following license agreement carefully		C	9
END-USER LICENSE AGREEM	ENT	[	^
IMPORTANT! THE LICENSOR, TZUNAM (HEREINAFTER REFERRED TO AS "TZUNAMI") A LICENSE THE SOFTWARE TO, (HER REFERRED TO AS "LICENSEE") ONLY ON THE CO THAT LICENSEE AGREES TO THE TER CONDITIONS SET FORTH IN THE FOLLOWIN AGREEMENT. Figure 1-3: Custom Setup Window

4. In the Ready to install Tzunami Confluence Exporter panel, click **Install**. Confluence Exporter is installed.

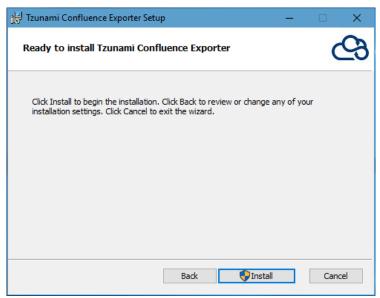

Figure 1-4: Installing Tzunami Confluence Exporter Window

5. Click **Finish** to exit from the setup wizard.

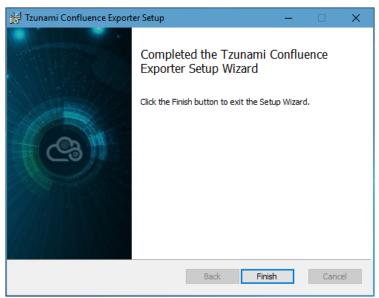

Figure 1-5: Installation Complete Window

When Tzunami Confluence Exporter is installed, it comes with a default license that can be used for evaluation purpose only. This license is limited in time and number of operations.

## **1.4 CONFIGURATION OF TZUNAMI SERVICE SETTINGS**

 When installing Tzunami Deployer/Exporter/Remote Service for the first time, a Tzunami Service Settings dialog is displayed. In Tzunami Service Settings, the Licensing Service, Link Resolver Service and O365 AD Service are pointed to localhost (same machine).

(,	-			
😋 Tzunami Service Settir	ngs			×
Address Licensing Service: Link Resolver Service:	localhost	Link Resolver Service Receive timeout: Send timeout:	Hour Minute 0 ← 10 ← 0 ← 5 ←	Second 0 × 0 ×
O365 AD Service:	localhost	O365 AD Service Receive timeout:	Hour Minute	Second
Licensing Service Receive timeout:	Hour Minute Second	Send timeout:		
Send timeout:		ОК	Cancel	

**Figure 1-6 Deployer Settings Manager** 

User can run the **Settings Manager.exe** application from the installation directory to display this service settings dialog at any time and updated the settings to point the Tzunami services as required.

In case of Remote Service installation, restart the Tzunami Remote Service after updating the Tzunami Service Settings.

If these services are installed in other machine, point to that machine with machine name or IP Address.

2. Click on OK.

## **1.5 UNINSTALL TZUNAMI CONFLUENCE EXPORTER**

This section of the guide illustrates different ways to remove or uninstall Tzunami Confluence Exporter from your Confluence Server. Here are the two different ways to uninstall Tzunami Confluence Exporters:

- Uninstallation using Installer.
- Uninstallation using Control Panel

To uninstall Tzunami Confluence Exporter, user needs to be a Local Administrator in the Confluence Exporter installed machine. Uninstalling Tzunami Confluence Exporter is simple and easy. You can remove or uninstall it in no time. You don't need to reboot your computer once the uninstalling process is complete.

Log files, licensing information files etc. will remain after uninstalling Tzunami Confluence Exporter. You can manually delete those files from your computer if needed. By default, logs are located at the "C:\Program Files\Tzunami\Deployer 4.0\Exporter\Logs", or where Tzunami Confluence Exporter is installed. Tzunami Confluence Exporter Options information will be available in "C:\Documents and Settings\All users\Application Data\Local\Tzunami" location.

## 1.5.1 Uninstallation using Installer.

To uninstall Tzunami Confluence Exporter using Installer

- 1. Close Tzunami Confluence Exporter.
- 2. Unzip the zip file and run TzunamiConfluenceExporter.msi. The Tzunami Confluence setup wizard (Welcome window) will launch. To advance through the remove installation wizard, click "**Next**" at the bottom of the screen.
- 3. In the Change, repair or remove installation panel, click "**Remove**" button to proceed to remove Tzunami Confluence Exporter from your computer.
- 4. In the Ready to remove Tzunami Confluence Exporter panel, click "**Remove**" to remove Tzunami Confluence Exporter from your computer.
- 5. Click **Finish** to exit the setup wizard.

You can right-click Tzunami Confluence Exporter setup (TzunamiConfluenceExporter.msi) file and select **Uninstall** to remove or uninstall Tzunami Confluence Exporter from your computer.

## **1.5.2 Uninstallation using Control Panel**

To uninstall Tzunami Confluence Exporter using Control Panel

- 1. Close Tzunami Confluence Exporter.
- 2. Click Start > Control Panel > Add or Remove Programs.
- 3. In Add or Remove Programs window, right-click the Tzunami Confluence Exporter application you want to remove, and then click **Uninstall**.

# **2** TZUNAMI CONFLUENCE EXPORTER

This chapter contains information of Tzunami Confluence Exporter. It contains the following topics:

- Overview
- Exporting from Confluence
- Command-line Export
- Re-Export
- Logging settings
- Best Practices

## 2.1 OVERVIEW

Tzunami Confluence Exporter enables organizations to migrate contents from Confluence to SharePoint 2007, SharePoint 2010, SharePoint 2013, SharePoint 2016, SharePoint 2019 and SharePoint Online using Tzunami Deployer. Tzunami Confluence Exporter is easy-to-use and convenient way to extract contents from Atlassian Confluence and load contents into Tzunami Deployer.

To load Confluence content into Tzunami Deployer, you must first extract the content, using Tzunami Confluence Exporter, into TDX (Tzunami Deployer Export) and STDX (Separate Tzunami Deployer Export) files. You can then load this TDX file into a Tzunami Deployer project.

When working with Tzunami Deployer on several machines, you can run an export on one machine and load the exported data on another. Tzunami Confluence Exporter is an extension module of Tzunami Deployer. You can work with this module independent of Tzunami Deployer or from within the Deployer.

### **2.1.1 Supported Types**

The Tzunami Confluence Exporter supports extraction of seven categories of contents from Confluence Server:

- Spaces
- Personal Spaces
- Pages
- Blogs
- Bookmarks
- Comments
- Attachments

### 2.1.2 Security

In addition to the structure and items, Tzunami Confluence Exporter extracts security information. The following permissions are used in the exporter:

- None
- Viewer
- Contributor
- Admin

Each item is assigned an ACL defining the permissions of the various members according to the roles they were assigned.

The exporter automatically creates four default roles that are used during the deployment process. The roles include None (No permission), Viewer (Read permission on Comments, Pages and Blogs), Contributor Edit (Add, Edit and Delete permissions on Pages, Blogs, Comments and Attachments), and Admin (change access permissions and owner of Pages).

## **2.2 EXPORTING FROM CONFLUENCE**

The Tzunami Confluence Exporter enables you to export Confluence contents to a TDX file. It has simple user interface and lets you quickly extract contents such as Spaces, Pages, Blogs, Comments, Attachments, Bookmarks etc.

When exporting, keep the following in mind:

**Export in small chunks**: When exporting from your source system, perform the export in small chunks of about 40K-50K files each that have a common business logic or some other logic.

**Ensure consistency**: Make sure that the content of the different exports does not overlap and that, while exporting, no changes are made to the source data.

#### To export to a TDX file:

1. In Tzunami Deployer, right-click in the Confluence tab source store area and select **Export** Confluence to TDX.

Or

#### Click Start > All Programs > Tzunami > Tzunami Confluence Exporter

The Welcome screen of the Export Wizard appears.

2. Click **Next**. The Confluence Configurations screen appears with two tabs: General and Advanced

#### a. General tab

The **General** tab allows you to select the item types that you wish to export from Confluence server. Select the item types listed in this section.

Confluen	Confluence Exporter Wizard — 🗆 🗙							
	ence Config re Confluence

Table 2-2: Confluence Configurations, Advanced Tab – Description of Fields

Field	Description
Versions	
Export Version	Check this option if you wish to export all versions of items. Uncheck this option, if you wish to export current versions of each item.

Field	Description
Max number of versions	Enter the number of versions you would like to export for each item.
	Setting this value to zero will export all versions.
	If number of maximum versions is specified, number of versions from latest version are exported.
Attachments	
Export bookmark's attachment as separate documents. (If unchecked, attachments are exported as item's attachment.)	Check this option to export all attachments of an item into a folder " <itemtype> Attachments". If you do not check this option, the attachments are exported as item's attachments. Note that checking this option will separate attachments completely from the parent items.</itemtype>
Export cross space attachments (If unchecked, cross space attachments will not be exported)	Check this option if you wish to export cross space attachments of an item into a folder " <itemtype> Attachments". If you do not check this option, cross space attachments will not be exported.</itemtype>
Export security	Check this option if you wish to export security setting of the selected items.
	The user must have Confluence Administrator permissions in Confluence Server to export security.
Export Personal Spaces	Check this option if you wish to export personal spaces from Confluence server.

### c. Direct Roots tab

The **Direct Roots** tab allows you to enter space key as root folder so that the space will be available to select for export out of the list as well.

You can select all subfolders of a selected folder by checking Automatically select subfolders.

6. Click **Next**. The Filter screen appears.

Confluence Exporter W	izard
<b>Filter</b> Please set a filter	
Properties: Created By ID Keywords Modified Modified By Title	Condition: Created Equals to V 21/Mar/2018 12:38:00 PM V Add Condition Clear Condition
Filter:	^
	Clear All       < Back     Next >   Cancel

Figure 2-11: Filter Screen

- 7. Set up filtering as follows:
  - a) In the Properties field, select a property.
  - b) In the Condition field, select a condition from the drop-down list and enter or select values in the corresponding field.
  - c) Click **Add Condition**. The condition is added to the Filter area, displaying the full filter expression.

You can only add one condition per property.

You can edit a condition for a property by selecting the property and modifying the condition type or values that are currently assigned to it.

You can remove a condition from a property or all the conditions from all the properties by clicking Clear Condition or Clear All, respectively.

This option works only for Data Items.

If multiple conditions are applied, only items that match all conditions are exported.

## **2.3 COMMAND-LINE EXPORT**

Tzunami Exporter for Confluence provides the ability to run export sessions non-interactively using command line instructions. This allows administrators to plan and schedule long running migration jobs through scripts, batch files and schedulers according to needs and organizational timetables. To run the exporter in batch mode you will need exporter specification file explained in the 'Choose Destination Folder' step of the export wizard. The file contains all the export option details including:

• Source ECM connectivity information (Server Address, Username, Password etc.)

- Items to export
- Destination and Log Folder
- Filter
- Exporter specific options

This file can be edited to suit your needs however the XML schema of the file should not be altered. It is recommended that you generate a sample specifications file in the *Error! R eference source not found.* selection step of the export wizard and use it as a template to create your own specification file.

Once the specification file is ready, you can run the exporter from command line using command:

#### Usage

Field	Description
-r	Outputs export results into an XML file [Optional]
-S	XML file containing export specifications

#### For example:

C:\User\Administrator> "C:\Program Files (x86)\Tzunami\Deployer

4.0\Exporters\Confluence \TzunamiExporter.exe" -s "D:\Spec Files\specs1.xml"

C:\Program Files (x86)\Tzunami\Deployer 4.0\Exporters\Confluence> TzunamiExporter.exe - s "D:\Spec Files\specs1.xml"

Based on your needs you can create number of specification files and use them to run multiple export sessions as batch commands.

You will need to provide absolute path for **TzunamiExporter.exe** and *ExportSpecificationsFile* in the command if you are not running the command from the exporter installation directory.

In Microsoft Windows 10, Windows 8, Windows 7, Windows Vista and Windows Server 2003/2008/2012 environment, if UAC (User Access Control) is enabled, Users with low privileges sometimes cannot export ECM contents. To export contents using command line, User must run with elevated or administrative privileges.

To export contents with elevated or administrative privileges, you can run the exporter from command line using command:

RUNAS /trustlevel:"Unrestricted" "<ExporterInstallationDirectory>\TzunamiExporter.exe" -s "<Spec file path>\Specfilename.xml "

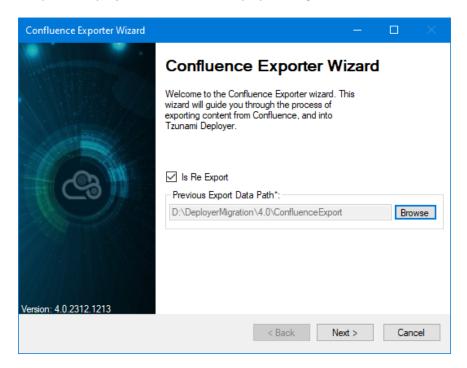

#### For example:

RUNAS /trustlevel:"Unrestricted" "C:\Program Files (x86)\Tzunami\Deployer 4.0\Exporters\Confluence\TzunamiExporter.exe" -s "D:\Spec Files\specs1.xml".

## 2.4 RE-EXPORT

Tzunami Exporter for Confluence provides the re-export feature. Re-export feature is applicable for previous export project having errors. When an export project has some failed items with errors that can be re-ran with this feature. At this time, the only the items having errors are processed so that user does not re-export all items included in the export project again. Perform the following steps to run the re-export for export project having errors:

- 1. Run the Tzunami Confluence Exporter.
- 2. In the **Confluence Export Wizard** window, check **Is Re-Export** option. Then, browse the previous project location directory by clicking on **Browse** button.

Then, click on Next button.

3. In **Confluence Configuration** window, you can set the parameters in **General**, **Advanced**, **Direct Roots and Actions** tabs as used previously.

Click on **Next** button. Then, click on **Done** button in the **Thank You** window. The reexported data are available in provided destination directory with all other relevant files. User can load the re-exported data from the Deployer migration project.

## **2.5 LOGGING SETTINGS**

In Tzunami Exporter, log is written in a persistent medium having as much information as possible about events that occur while the software runs. That information plays a vital role while diagnosing if any issue occurs during the export process. Hence, it is worth mentioning that logger writes each and very details during.

Tzunami Inc provides the settings for writing logs. There are the following log levels that the user can change before running the tool.

- 1. Go to installation directory of the exporter and open **TzunamiExporter.exe.config** file in an editor.
- 2. Locate the key and set corresponding values as mentioned below:
  - LogLevel: Set the esteem to "Debug" or "High" or "Normal" or "low" or "none".

#### Figure 2-19 Log level Settings

- **Debug:** Writes logs as much as possible. So, this setting includes the maximum level of verbosity. By default, the tool is packaged with this setting.
- **High:** Writes logs as much as possible for warnings and errors. However, it will not log possible diagnostic information.
- Normal: Writes logs for anticipated errors and warnings.
- Low: Critical errors are logged. There will be as low as possible information logged.
- None: No such logs are written.
- 3. Save the file. Then run the exporter.

## **2.6 BEST PRACTICES**

Due to the technological differences between Confluence and SharePoint, the following best practices should be taken into consideration:

• Migrate folders to their relative list types, based on the items in those folders:

#### Table 2-7: Target Structure Guidelines

Confluence Item Type	Relevant SharePoint Types
Space	Site
Personal Space	My Site Collection
Pages	Wiki Page Library
Blogs/News	Blog Posts
Blog Comments	Blog Comments
Bookmarks	Link Lists
Comments	Discussion List
Attachments	Document Library

- The Confluence Spaces contain the User ACLs. All the child folders and items inherit security from it. If Confluence Spaces is not extracted as a root folder, the selected child folders of Confluence Spaces contain the User ACL and child items inherit security.
- To export security, the user must have Confluence Administrator Permissions.
